Fall Protection

Fall protection must be provided for each worker on a walking/working surface with an unprotected side or edge at a height 6 feet or greater.

Common Fall Protection Equipment:

- Shock-Absorbing Lanyard
- Rope & Cable Grabs
- Carabineers
- Self-Retracting Lifeline
- Full Body Harness

Management Should:
- Develop, implement and commit to a fall protection program.
- Provide training on the fall protection program.
- Evaluate the program on a regular basis to ensure the program’s effectiveness and determine whether it needs to be changed or updated.

Use at least one of the following whenever workers are exposed to a fall of 6 feet or more above a lower level:
- Guardrails on ladders, roofs and platforms
- Safety Net Systems
- Fall Arrest Systems
